

Informed Consent Form

Dear Participant,

Thank you for your willingness to participate in this research. This informed consent form is intended to ensure that you fully understand the purpose of the study, the tasks involved, the potential risks, and your rights before making a decision to participate.

I. Project Description:

We are conducting a research project focused on the ethical alignment of artificial intelligence. Specifically, our goal is to construct a large-scale value rule corpus grounded in the mainstream Chinese value system—the Socialist Core Values.

This corpus, titled the Chinese Value Rule Corpus (CVC), is designed to support the value assessment and cultural alignment of large language models (LLMs) in Chinese sociocultural contexts.

This project is independently initiated and organized by the research team and is intended solely for non-commercial, academic research purposes.

II. Annotation Task Overview:

The annotation task is based on a set of candidate value rules that have been extracted and filtered from multiple sources, including open-source scenario datasets, web-crawled texts, and foreign value rule corpora.

A candidate rule refers to a concise moral judgment expressed in natural language (e.g., *"One should respect others"*, *"Vandalism is wrong"*), typically structured as a “behavior + evaluative judgment,” and clearly value-oriented.

You will be asked to annotate each rule by evaluating whether it:

- Is related to values;
- Contradicts the mainstream Chinese value system;
- Meets the formal definition of a value rule (i.e., contains normative judgment and conforms to language conventions);
- Is semantically complete and unambiguous.

For rules that do not meet the criteria, you are expected to revise and rewrite them according to the provided annotation templates.

All rule content has been pre-processed by large language models and preliminarily screened by the research team. No personal information is involved. However, a small number of entries may include expressions inconsistent with mainstream values. You are asked to identify and revise such content as instructed.

III. Annotation Process and Time Commitment:

The estimated total annotation time is no more than 3 hours. The research team will provide standardized training materials, including task objectives, operation guidelines, and illustrative examples.

The annotation will be conducted using spreadsheets and can be completed independently under the team's coordination.

Each participant will be responsible for annotating approximately 1,800 value rules, including classification and rewriting where applicable. For any issues during the process, support will be available through on-site assistants or the project coordinator.

IV. Privacy and Data Protection:

- We will only collect minimal background information (e.g., name, educational background). No personal identifiers, contact details, or behavioral/biometric data will be collected;
- All data will be used exclusively for academic research and will not be shared with third parties or used for commercial purposes;
- The annotated data will be anonymized prior to publication to ensure participant privacy and data security.

V. Risk Statement:

The annotation content is based on public texts, but some entries may include topics that are controversial or misaligned with your personal beliefs (e.g., surrogacy, cyberbullying). We have taken measures to minimize such risks.

If you feel uncomfortable at any point during the task, you may withdraw from participation at any time, without any negative consequences.

VI. Compensation and Participant Rights:

This is a non-commercial academic project. Each participant will receive monetary compensation equivalent to no less than 1.5 times the local minimum hourly wage.

You have the right to:

- Be fully informed about the task content;
- Participate voluntarily and withdraw at any time;
- Raise any questions regarding the task;

All results will be processed anonymously to safeguard your legal rights and personal interests.

VII. Contact:

For further information about this study or to raise any questions or concerns, you may contact the principal investigator at:

Email: wuping2025@ia.ac.cn

Consent Statement:

I have read and understood the above information, including the purpose of the study, task requirements, data usage, and my rights. I voluntarily agree to participate in this annotation task.
